

Core Concepts

- Self-correction mechanisms
- Runtime error detection
- Adaptive learning systems
- Feedback loops
- Meta-learning
- Reinforcement learning from human feedback (RLHF)
- Constitutional AI
- Chain-of-thought reasoning
- Tree of thoughts
- Reflection and refinement

Technical Terms

- Agentic workflows
- Multi-agent systems
- Error propagation
- Gradient-based correction
- Attention mechanisms
- Memory augmentation
- Planning and execution
- Tool use and API integration
- Causal reasoning
- Uncertainty quantification

Evaluation Metrics

- Self-correction accuracy
- Error detection rate
- Recovery time
- Robustness measures
- Hallucination detection
- Consistency metrics
- Human preference alignment
- Task completion rates
